

**Updated: July 11, 2008**

**Product: SHOWGUN automated luminaire**

**Subject: Loose tilt adapter screws**

---

The tilt adapter screws on some SHOWGUN fixtures may work loose. If you find that you have this issue, you may simply tighten the tilt adapter screws to the factory specified setting of 30 inch-pounds. In rare instances the screw could strip out and will need to be replaced with a M4x18 socket cap screw. These screws can be found through a local hardware supplier, or contact High End Systems Product Support at 1-800-890-8989.
