

Wholehog v3.1.4 Release Notes

Version: 3.1.4 (2720) January 26, 2010

Wholehog 3 Console and Rack Mount, Hog 3PC, Road Hog Full Boar, Hog iPC, Road Hog

Version 3.1.4 b2720 is a software update for all Wholehog Consoles. It is recommended that all users of Wholehog consoles upgrade to this software version.

Feature Changes

Hog3PC will now install on Windows 64-bit operating systems. Please note however that Flying Pig Systems USB devices such as dmx widgets, playback wings, programming wings, and timecode widgets are still not functional with Windows 64-bit operating systems. Our development team is currently working on 64-bit device drivers for these devices to be compatible with a future version of Hog3PC on Windows 64-bit operating systems.

Wholehog v3.1.4 (Build 2720) Bug Fixes

- 8901 Crash adjusting encoder values
- 10151 Crash when closing the fixture window behind a modal window
- 10584 Pressing Setup a second time should close the setup toolbar
- 11256 Fanned Effect timing is applied using fix num and not selection order
- 11257 Live crashes the desk when specifying range of palettes that don't exist
- 13077 Merge Show window is not centered
- 13078 Open + Backspace to close the show Merge Window will crash the desktop
- 13142 Flashing Manual Xfader while fader is at 0 puts output intensity at 0%
- 13203 Desktop crash when abusing the output window
- 13206 Allow Hog3PC to install on 64-bit machines with a USB devices warning dialogue
- 13209 Cue Only should release using the next cue's fade time rather than its release time
- 13237 Cannot select a palette in list view
- 13250 Cue Only Manual Xfaders releasing immediately in 0s when fader is moved
- 13254 iPC, RH, and RHFB front panels flash random LEDs on startup
- 13279 DP8K network boot failure due to intram FS failing to extract during a Win32 install
