DHCP / Static IP- Tech Note

The Axon HD, HD Pro, DLHD and MMS support Static IP addressing. This can be set in the network tab of the CMA, or directly in case of the MMS and DLHD. Standard networking rules apply for setting the values, as shown below. Upon pressing the apply button, a second confirmation will be required, this is by design, as a wrong IP address will make the server unreachable remotely.

Note: Scanning for duplicate address is not undertaken; be sure not to assign duplicate address on the network.
