	Using Full Boar 3 Wings with Full Boar 4	13-Dec-2012	Rev A

The Full Boar 4's external monitor outputs are "digital only" DVI-D monitor outputs that do not natively work with the analog displays that are built into the older Full Boar 3 programming and playback wings.

However, the displays on the older Full Boar 3 Programming and Playback Wings can still be connected to the Full Boar 4 console's monitor outputs through the use of a digital-to-analogue video conversion box.

High End Systems has tested and recommends the hardware listed below.

Star Tech DVI to VGA Video Converter
Part# DVI2VGACON

The DVI2VGACON High Resolution Video DVI to VGA Converter converts a DVI-D (digital) input video signal to a VGA (analog) output for resolutions up to 1920x1200.

Instructions for use with Full Boar 4 and Full Boar 3 Wings:

- 1) Connect the adapter's DVI-D cable to one of the Full Boar 4's DVI-D outputs
- 2) Connect the Full Boar 3 Wing to the VGA port on the adapter
- 3) Plug the adapter's 5v USB power cable into one of the USB ports on the back of the FB4.
- 4) Configure your Full Boar 4's monitor outputs as usual
